REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: the prior art fails to teach or suggest a coating apparatus for coating a web comprising: a hopper defining a distribution chamber extending transversely of the direction, a flow face extending generally in and transverse to the web-travel direction, a slot extending between the chamber and the flow face and elongated transversely of the direction; means for supplying the coating liquid to the chamber, thence through the slot to the flow face, and thence along the flow face and for dropping the liquid as a transversely extending and downwardly flowing curtain from an edge of the flow face onto the web; a pair of transversely spaced edge guides having upper guide elements having transversely confronting faces and fittable complementarily to the flow face, the upper guide elements lying in a use position substantially directly on the flow face to limit liquid flow to a region thereon defined between the transversely confronting faces that hence define the width of the curtain; means for transversely positioning the edge guides and thereby adjusting the curtain width; and respective lower guide elements each having an inner face aligned vertically with the face of the respective upper guide element, the lower guide elements being fixed to and transversely displaceable with the respective upper guide elements.

The prior art fails to teach or suggest a coating apparatus for coating a web comprising: a hopper defining a distribution chamber extending transversely of the direction, a flow face extending generally in and transverse to the web-travel direction, a slot extending between the chamber and the flow face and elongated transversely of the

Art Unit: 1792

direction, and a supply passage opening generally centrally into the chamber; means connected to the passage for supplying the coating liquid centrally to the chamber, thence through the slot to the flow face, and thence along the flow face and for dropping the liquid as a transversely extending and downwardly flowing curtain from an edge of the flow face onto the web; a pair of transversely spaced edge guides having upper guide elements having transversely confronting faces and fittable complementarily to the flow face, the upper guide elements lying in a use position substantially directly on the flow face to limit liquid flow to a region thereon defined between the transversely confronting faces that hence define the width of the curtain; means for transversely positioning the edge guides and thereby adjusting the curtain width; a pair of transversely spaced inserts each substantially blocking the slot and the chamber; means for transversely displacing the inserts and thereby setting a transverse width of the chamber and slot; and structure linking the inserts to the respective guides for joint transverse displacement therewith, the inserts having confronting inner faces aligned vertically with the faces of the respective upper guide elements.

The recitation in independent claim 10 along with its dependent claims of a means for supplying, means for transversely positioning the edge guides, means for aspirating coating liquid, means for releasably securing lower guide elements to upper guide elements, means for transversely displacing the inserts has been treated under 35 USC 112, sixth paragraph.

The recitation in independent claim 18 along with its dependent claims of a means for supplying, means for transversely positioning the edge guides, means for

Art Unit: 1792

transversely displacing the inserts, means for lifting upper guide elements off flow face has been treated under 35 USC 112, sixth paragraph.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
